

## **EDGE and IAI Sign MOU to Establish Localised Electro-Optics Maintenance Centre**

EDGE, the region's leading technology company for defence and beyond, and Israel Aerospace Industries (IAI), Israel's primary defense and aerospace development and manufacturer, today announced a Memorandum of Understanding (MoU) to establish a maintenance centre for a selection of IAI's systems in the UAE. In addition to maintenance, the centre will advance local marketing of these systems. The agreement covers electro-optics advanced systems including IAI's POP family (Plug-in Optronical Payload) systems, Mini-POP and MOSP (Multi-Sensors Optronical Stabilised Payload) surveillance payloads for land, naval and air applications.

IAI's POP is a Plug-in Optronical Payload electro-optical sensor system, equipped with a powerful laser designator and eye-safe range finder. The MiniPOP is a dual-axis that includes a continuous zoom colour day camera and a thermal imaging camera, a laser pointer, eye-safe laser rangefinder, and automatic tracker. The MOSP is a highly stabilised long-range reconnaissance and targeting multi-sensor family of payloads for Airborne and maritime applications.

Speaking at the ceremony, Mr. Al Zaabi said: "This agreement with a leading global industry player such as IAI will create many opportunities for the expansion of EO/IR services here in the UAE and further afield. By combining IAI's expertise in the field and our own experience in providing advanced solutions locally, we can expedite complex maintenance processes for the benefit of our customers, while expanding the scope of collaboration on future opportunities."

Boaz Levy, President and CEO of IAI added: "Localisation and cooperation are central and critical to our UAE strategy's success. The partnership with EDGE Group will allow us to provide full advanced and world-class solutions for the final customers, including maintenance facilities and capabilities. We will work together to provide state of the art EO/IR systems and optimise turnaround time to better serve local end-users and provide the highest value; resulting in greater availability and performances of mission critical system."

Both companies will also form a standing joint committee to identify opportunities in this field within the UAE, and to expand future cooperation in other countries.
